3D-Printed Implants for Neurosurgery

Short description: Implementation of Algorithms to reconstruct and 3D-print Implants for Neurosurgery

Goal: The objective of this interdisciplinary project between Computer Science and Medicine is to develop algorithms for the reconstruction of neurosurgery implants. The plan is to 3D-print the patient-individual implants in the OR shortly after the surgery. The project will be carried out in cooperation with the Neurosurgery Department of the Medical University of Graz.

Note: Biomedical Engineering Students are welcome!

Keywords: Reconstruction, Implants, 3D Printing, Image Analysis, Computer Vision, Segmentation, Registration, Visualization
